

ARTIFICIAL GRASS

Why should you choose artificial turf over natural grass for your garden?

Before you fill your mind with thoughts of grass seed or laying strips of natural turf- stop right there! Wouldn't it be great if your lawn could look lush, green and well maintained all year round? Wouldn't it be marvelous if the weekly lawn cutting ritual became a thing of a past? Wouldn't it be nice to have your neighbours comment on how lovely your garden looks when they come over for the customary BBQ? Then you may find yourself considering installing artificial turf in your garden. As well as the above points, there are many benefits of choosing this over natural turf.

Lower Maintenance

Whilst there is still an element of maintenance with artificial turf, it can be much easier to look after than natural turf. It does not require any watering, mowing, or fertilising. It replicates all the usual qualities of a natural lawn in terms of look and feel, and allows you to sit back and enjoy your outdoor space, rather than engaging in the never ending battle of weeding. Artificial grass is an especially attractive option if you live somewhere with acidic soil, or any other ground conditions that make it difficult for natural grass to thrive.

Safe

All of Profloorz landscape products provide an environment that is safe for both children and pets. Hygiene wise, it is easy to remove foreign bodies with light watering, making it free from harmful materials.

Long Lasting

Natural grass will look dull in the winter time, and may develop brown patches from lack of moisture and minerals; especially if you have garden apparatus or furniture.

SPECIFICATIONS:

TYPE	PRO-GYMTURFIA	PRO-LANDSCAPIA
MATERIAL / DTEX	PP 6000D	PE & PP 7500D
GAUGE	3/16"	3/8"
YARN	CURLY YARN	MONOFILAMENT –CURLY YARN EMERALD & LIME GREEN
